TINYBUDS by TinyOwl

Your earbuds battery, at a glance.

A small widget on the home screen shows how much is left in your Bluetooth earbuds. A tap shows the rest: each bud, the case, time left and how long you listened this week.

On the home screen

A 3×1 or 1×1 widget with rings or bars, always up to date.

Left, right, case

Each bud and the case on SoundPeats earbuds, the overall level on the rest.

Time left

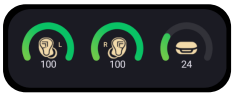

About how long the buds will last at today's pace, and a week of listening.

Independent app. Not made, endorsed or supported by any earbuds manufacturer.

GETTING STARTED

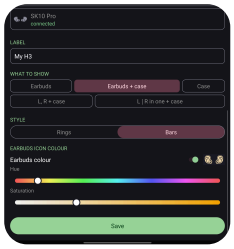

A widget for your earbuds.

TinyBuds shows the battery of your Bluetooth earbuds on the home screen. Pair the earbuds with the phone as usual, then add a widget. On first use the app asks for **Nearby devices**: it needs it to see your paired earbuds and their battery.

Add the widget

Open TinyBuds and tap **Add widget**, or long-press the home screen, open **Widgets** and find TinyBuds. There are two sizes: **3×1** and **1×1**. When the earbuds are not connected, the widget keeps the last level and shows how long ago it was seen, for example **2 h ago**.

Setup

When you add a widget, the setup screen opens. **Choose earbuds** from your paired devices, then pick what to show, the style, a label and a color. **Save** puts the widget on the home screen. To change it later, tap the widget and then **Setup**.

What to show

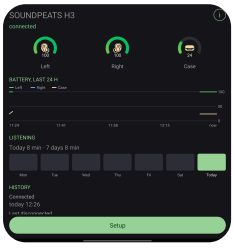

Earbuds - one level for the pair. **Earbuds + case** - the pair and the case. **Case** - the case alone. **L, R + case** - the left bud, the right bud and the case, each on its own. **L | R in one + case** - left and right in one block, next to the case. Only the options your earbuds support are offered: earbuds that report one overall level show **Earbuds** only.

Style, label and color

Rings draw each level as a ring around an icon; **Bars** draw it as a bar. **Label** adds a short name on the widget, handy with several pairs. The **earbuds color** paints the icons: the brand color, or your own.

THE EARBUDS PAGE

Tap the widget for the whole story.

Earbuds page

At the top, the earbuds name and whether they are connected, then a ring for each level: **Left**, **Right** and **Case**, or one ring for the pair. **Time left** tells about how long the buds will last at the pace of today's listening. **Battery, last 24 h** draws the left and right levels over the day. **Listening** shows today and each of the last 7 days. **History** tells when the earbuds were last connected, last disconnected and last charged in the case. **Setup** at the bottom opens the widget settings.

Supported earbuds

Any earbuds that report their battery to the phone show the overall level: Samsung, KZ, Sony and many others. If your phone shows the earbuds battery in the Bluetooth settings, TinyBuds can show it too.

SoundPeats earbuds such as the H3 also show the **left** bud, the **right** bud and the **case**, each on its own. TinyBuds asks the earbuds for these levels over Bluetooth while they are connected. If a level does not show up, tap **Check again**.

FREE AND PRO

Free for one widget. Pro for the rest.

Every new install gets **Pro free for 14 days**. After the trial the widget keeps working with the free look. Pro is a one-time **2.99 EUR** purchase on Google Play, with no ads and no subscription.

	FREE	PRO
Widgets	One	More than one
Style	Rings	Rings or bars
Color	Brand color	Your own colors
Label on the widget	-	Yes
Overall level, all earbuds	Yes	Yes
Left, right and case (SoundPeats)	Yes	Yes
L | R in one block	-	Yes
Earbuds page with rings and history	Yes	Yes
Time left	-	Yes
Battery graph, last 24 h	-	Yes
Listening time, 7 days	-	Yes
Ads	None	None

The purchase stays with your Google account and comes back when you reinstall the app.

Privacy

No TinyBuds account, no ads, no analytics, no tracking, and no server of ours; nothing is sent to us. Everything the app reads and stores stays on the phone. The only online service it uses is Google Play, for the optional Pro purchase. The full policy: **tinyowllabs.com/tinybuds/privacy**
